*Engineered to handle a
demanding workload with ease*

ES5 Series

Tap Water Steamers Half Pan Size

Wider Menu Variety

Not too long ago, the primary functions of food steamers were to re-hydrate bakery items, plump cook a hot dog or quick thaw frozen foods. Today, foodservice operators have discovered they can broaden their menu by making more use of steam heat.

From appetizers to desserts, we found that steam heat can be used to cook, warm, re-hydrate and freshen almost every type of pre-cooked, refrigerated, fresh or frozen food.

Our ES5 series steamer lets you prepare your most popular menu items in advance and refrigerate until you're ready to steam and serve. All the precious moisture, texture and flavor of your foods can be maintained through the convenient use of steam heat.

Simple to Use—Easy to Operate

The ES5 series food steamers have been engineered to handle the most demanding workload. ES5 steamers are furnished with an adjustable lid hinge that gives you the option of opening the lid to either a 60° or 90° position. The hinge also includes counter-balanced springs to prevent the lid from slamming closed.

Cooking your favorite dishes has never been so easy. On your command, the EmberGlo steamer starts working almost immediately—injecting gentle spurts of tap water into the generator, producing clean, hot steam.

The ES5PB, ES5PC and ES5CT direct water hook up models include a six foot flexible hose and quick disconnect fittings... making installation a snap! Direct-water hook-up provides a constant water supply to the unit and allows the water line to be removed for easy cleaning—without shutting off the kitchen's water supply.

Our ES5M, ES5MT, ES5PBS, ES5PCS and ES5CTS portable models have self contained one gallon capacity water pans—allowing these units to be easily moved from one place to another for your operating convenience... the perfect model for any task.

EmberGlo's ES5CT, ES5CTS, ES5PC and ES5PCS automatic models include timers, offering you even greater possibilities to expand your menu. The main control timer may be set for any cooking time, automatically injecting steam at 20 second intervals. A buzzer signal and light will alert you when the cooking cycle is complete. These models also include a manual button, allowing you to hydrate rolls, melt cheese, warm a deli sandwich—all with the push of a button.

Export models shipped with cord less plug and U.S. agency approvals.

Experienced

chefs agree that re-heating pre-

cooked foods with steam heat is often

better than relying on conventional ovens or

microwaves. Unlike these dry heat sources, steam

heat doesn't dry out food; instead, it locks in flavor and

freshness while heating foods thoroughly and with uniform

consistency. Now you can have all the fresh, nutritional and

flavorful advantages of food steaming — plus the proven

dependability and efficiency of EmberGlo engineering

without the restriction of supplying distilled or

demineralized water. It all adds up to

greater convenience for you.
